

Rivera/Jose family	Present benchmark	Scientific role	Task
Gradient boosting	XGBoost	Strong tabular baseline; boosting	Both
Decision tree	Decision tree	Interpretable nonlinear baseline	Ignition
—	Random forest	Bagging control added in this work	FSR
<i>k</i> -nearest neighbours	<i>k</i> - NN	Local similarity in condition space	Both
Multilayer perceptron	MLP	Smooth nonlinear approximation	Both
Support-vector regression	SVM / SVR	Linear versus radial kernels	Both
Linear and shrinkage model	Not retained	Weak prior on heterogeneous FSR table	

Protocol extension: nested selection; paper-disjoint testing; source/class weighting; robust losses and target transforms.
