

Flame-spread-rate regression — executable evaluation design

FROZEN OUTER PROTOCOLS

EVALUATION UNIT

ROLE

Interpolation 10 quantile-balanced 80/20 splits	held-out rows	2,024 train / 507 test
Extrapolation 10 balance-screened paper splits	14 held-out papers	52 training papers; primary evidence
Training ablation real data (rd) vs rd + 1,000 resamples	same untouched test	copies retain source-paper identity
